

ZOS: An Electronic Discount Token System

Michael Gucci, MD
Michael.Gucci@21Zephyr.com

Abstract

ZOS is a unique token on the EOS Blockchain. ZOS is an Electronic Discount Token System and offers discounts on payments for services rendered by AirDropsDAC. There will be a strictly limited total supply of 10 Billion ZOS tokens. This limit will never be increased. ZOS can be used to pay for any fees on the AirDropsDAC platform. Significant discounts can be obtained by paying the fees with ZOS. All the received ZOS tokens will be burned up to a limit of 50%. We will eventually burn 5 Billion ZOS tokens. This will leave a final supply of 5 Billion ZOS tokens.

Introduction

AirDropsDAC is a project on EOS Blockchain offering Airdrops as a Service to developers. The goal for AirDropsDAC is to enable creators to focus on creation and decouple the process of token creation and distribution from development of the DAPP.

AirDropsDAC offers a wide range of services ranging from technical assistance, marketing, seed funding and resources needed for airdrop of the tokens, including RAM and CPU.

Discount Cards are frequently used in everyday commerce. Electronic discount tokens have been successfully deployed by Binance and other exchanges.

ZOS is designed as a simple Electronic Discount Token System. Significant discounts can be obtained when ZOS is used to pay for services on the AirDropsDAC platform.

	1st Year	2nd Year	3rd Year	Perpetuity
Discount Rate	50%	25%	13%	13%

Token Economics

Initial supply: 10,000,000,000

Max supply : 10,000,000,000

All the ZOS received in fees will be burned up to a limit of 50%.

Final supply after 50% of the tokens have been burned:
5,000,000,000.

Token Distribution

300 Million ZOS tokens will be airdropped over a 12 month period, beginning from 1st of January 2019 to 31st of December 2019.

All the ZOS received as fees will be sent to a burn account and will be burned on the EOS blockchain in a verifiable manner. A maximum of 50% of the total supply, i.e., 5,000,000,000 ZOS will be burned eventually.

5 Billion ZOS will be held in a corporate account. Every quarter, an amount of ZOS equivalent to the amount of ZOS burned, will be released from this account to circulation.

4 Billion ZOS will be held in a smart contract which exchanges EOS to ZOS in multiples of 1,000. 1,000 EOS can always be exchanged for 1,666,666.6 ZOS from this smart contract until the account is depleted.

100 Million ZOS is reserved for marketing and promotion and team.

600 Million ZOS is reserved for special activities intended to promote community participation. We will be releasing details about this soon.

Team

ZKS3103 SEZC

ZKS3103 SEZC is a software company in the Cayman Enterprise Zone.

Advisors

Michael Gucci, MD

Founder and Interim Custodian for AirDropsDAC, Founder of Z-Meta private investment firm, Z11K accelerator in Chicago and 21Zephyr, Inc. Former ER physician and an early adopter of EOS.

Tom Connolly

CEO for AirDropsDAC. Formerly worked at Apple for 20 years.

Nathan Rempel

CTO for AirDropsDAC, founding partner of Australian block producer GenerEOS and the sole developer of eostoolkit.io
